# Service Level Specification for Flood Forecasting and Warning Services for Queensland – Version 3.1

This document outlines the Service Level Specification for Flood Forecasting and Warning Services provided by the Commonwealth of Australia through the Commonwealth Bureau of Meteorology for the State of Queensland in consultation with the Queensland Flood Warning Consultative Committee

Service Level Specification for Flood Forecasting and Warning Services for Queensland

Published by the Commonwealth Bureau of Meteorology

## List of Schedules

|                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Schedule 1: Flood Warning Consultative Committee .....                                                                                    | 17  |
| Schedule 2: Forecast locations and levels of service .....                                                                                | 18  |
| Schedule 3: Information locations with flood class levels defined .....                                                                   | 28  |
| Schedule 4: River data locations .....                                                                                                    | 53  |
| Schedule 5: Enviromon base stations installed in Queensland .....                                                                         | 75  |
| Schedule 6: List of Data Sharing Agreements for data provision .....                                                                      | 77  |
| Schedule 7: List of sites owned and maintained by the Bureau .....                                                                        | 78  |
| Schedule 8: List of sites where the Bureau assists other agencies with maintenance .....                                                  | 97  |
| Schedule 9: List of sites where the Bureau co-locates equipment and the site is owned by another agency .....                             | 118 |
| Schedule 10: List of flood warning related products issued by the Bureau in Queensland (warnings, watches, bulletins, river alerts) ..... | 123 |
| Schedule 11: Changes to this Service Level Specification .....                                                                            | 134 |

## List of Appendices

|                                     |     |
|-------------------------------------|-----|
| Appendix A: Glossary of terms ..... | 135 |
| Appendix B: References .....        | 137 |

## 1 Introduction

- 1.1** The purpose of this Service Level Specification is to document and describe the flood forecasting and warning services provided by the Bureau of Meteorology (the Bureau) in Queensland.
- 1.2** The Bureau's flood forecasting and warning services are provided within the context of the Total Flood Warning System as defined in the Australian Emergency Manuals Series, Manual 21 Flood Warning (Australian Government, 2009 and illustrated in Figure1).

**Figure 1: The components of the Total Flood Warning System (Australian Emergency Manual Series, Manual 21 Flood Warning, Australian Government 2009)**

- 1.3** The Total Flood Warning System recognises that a fully effective flood warning service is multi-faceted in nature and its development and operation involves input from a number of agencies each with specialised roles to play. It is vital that the agencies involved work in close cooperation through all stages of developing and operating the system. The services described here are the Bureau's contribution to the Total Flood Warning System.
- 1.4** The Bureau's main role in the Total Flood Warning System is focussed on monitoring and prediction, and to a lesser extent interpretation, message construction and communication components (see Appendix A for descriptions). The Bureau also contributes to review activities and takes a role in the planning and coordination activities associated with ensuring that the activities of all agencies and appropriate linkages are well coordinated. The roles and responsibilities of all key stakeholders involved in the provision of a flood warning

service in Queensland are described in the National Arrangements for Flood Forecasting and Warning (Bureau of Meteorology, 2015)<sup>1</sup>.

- 1.5** This Service Level Specification is concerned with describing the Bureau's role in the Total Flood Warning System and its interaction with other stakeholders as described in the National Arrangements. This is to ensure that the service the Bureau is providing in support of each of the relevant components of the Total Flood Warning System is understood by the Bureau and other stakeholders.
- 1.6** A description of the activities that make up the Bureau's flood forecasting and warning services for Queensland is given in Section 3. This set of activities, associated products and target levels of service constitute the current standard services provided freely by the Bureau. The Bureau also provides supplementary services on a commercial or cost recovery basis but they are not covered in this document.

---

<sup>1</sup> The National Arrangements for Flood Forecasting and Warning (2015) is available on the Bureau's website: <http://www.bom.gov.au/water/floods/document/National-Arrangements.pdf>

## **2 Flood Warning Consultative Committee**

- 2.1** The Queensland Flood Warning Consultative Committee provides the Bureau's key stakeholder's with a consultation mechanism for its flood forecasting and warning services. As such, the committee is responsible for reviewing this Service Level Specification on an annual basis or as required.
- 2.2** The overall role of the Queensland Flood Warning Consultative Committee is to coordinate the development and operation of flood forecasting and warning services in Queensland, acting as an advisory body to the Bureau and participating State and local government agencies. Membership and terms of reference for this committee in Queensland are detailed in Schedule 1.
- 2.3** The Bureau chairs and provides the secretariat support to the Queensland Flood Warning Consultative Committee, which meets six monthly depending on need and activity.

### 3 Bureau flood forecasting and warning services

**3.1** The scope of services covered by this Service Level Specification is confined to those dealing with riverine flooding caused by rainfall where typical rain-to-flood times are six hours or more. Flash flooding (rain-to-flood times less than six hours) and flooding caused purely by elevated sea levels are not covered, nor are the weather forecasting and other services the Bureau provides that contribute to the flood forecasting and warning service, including Severe Weather Warnings, Severe Thunderstorm Warnings, Tropical Cyclone Warnings, provision of radar data and rainfall forecasts.

**3.2** The nature of the services covered by this Service Level Specification include undertaking the routine catchment monitoring and river height prediction activities necessary for operation of the Total Flood Warning System, as well as issuing and publishing specific warning and data products. These activities are listed below with further detail and associated performance measures provided in subsequent sections.

- Collect and publish rainfall and river level data
- Routine monitoring of flood potential
- Flood modelling and prediction
- Automated information and alerting
- Issue flood watches
- Issue flood warnings
- Communication of flood warnings and flood watches
- Data networks, communications and storage
- Operations
- Maintain systems to collect data and flood information
- Planning and liaison
- Support for emergency management training and training exercises

#### 3.3 Collect and publish rainfall and river level data

**3.3.1** The collection and publishing of rainfall and river levels is an important component of the overall service. Apart from use by the Bureau for data analysis and its hydrological modelling for flood predictions, the data is also used by the emergency service agencies, numerous operational agencies, businesses and the public to monitor rainfall and river conditions. To assist in describing the service, the locations where river height; dam, weir or lake level; and tidal observations are made are categorised into three types; namely forecast location (Schedule 2), information location (Schedule 3) and data location (Schedule 4).

- **Forecast location** is a location for which the Bureau provides a forecast of future water level either as the class of flood that is predicted (minor, moderate or major) or as a level and class – refer to Appendix A for definitions. At these locations observed data, flood classifications and additional qualifying information will also be available (Schedule 2).
- **Information location** is a location at which flood classifications are defined and observations of water level data are provided. At these locations forecasts of future water level are not produced. Other key thresholds may be defined and reported against (Schedule 3).
- **Data location** is a location for which just the observed water level data is provided. Flood classifications are not available for these locations and forecasts of future water level are not produced (Schedule 4).

- 3.3.2** An indicative level of priority has been assigned to each observing site and key communication infrastructure such as radio repeaters (Schedules 2-4 and 7-9) based on a three-tiered scheme (Table 1). The priority level is based on the expected impact to the Bureau's services. The impacts identified are the expected outcome of a service outage at that site during a flood emergency. Impact is described in terms of forecast performance and the Bureau's ability to provide a flood warning service. Note that the scope of this priority scheme is limited to consideration of the requirements of forecasting and prediction only and should not be confused with any other priority assigned to that site by third party owners or other users.

**Table 1: Site priority**

| Priority Level | Impact on performance                | Impact on service delivery                                                        | Description                                                        |
|----------------|--------------------------------------|-----------------------------------------------------------------------------------|--------------------------------------------------------------------|
| High           | Very difficult to meet target        | Direct and significant high level impact for the site and/or downstream locations | Degradation of service highly likely.                              |
| Medium         | Difficult to meet target             | Some impact for the site and/or downstream locations.                             | Possible degradation of service.                                   |
| Low            | Not likely to affect meeting targets | Little impact on the site and/or downstream location                              | No change in service. Lower possibility of degradation of service. |

**Note:** Multiple outages within a given network will lead to a higher impact and greater service degradation. Table 1 indicates the effect of a single failure within an otherwise functional network.

### 3.4 Routine monitoring of flood potential

- 3.4.1** The Bureau will maintain an awareness of catchment conditions and monitor the potential for riverine flooding. This monitoring activity will be supported by the Bureau's weather services as required and is an activity undertaken to plan future flood operations.

### 3.5 Flood modelling and prediction

- 3.5.1** The Bureau will develop and maintain prediction systems for the forecast locations listed in Schedule 2.
- 3.5.2** The Bureau prediction systems can include real-time hydrologic models, simple peak to peak correlations and other hydrologic techniques as appropriate.
- 3.5.3** The Bureau prediction systems will be maintained and updated following significant events or when new data becomes available.
- 3.5.4** The target level of performance for the prediction at each forecast location is given in Schedule 2.

### 3.6 Automated information and alerting

- 3.6.1** In Queensland, a threshold-based river alerting service is provided through river height bulletins outlined in Schedule 10. A rainfall alerting service is not provided in Queensland.

### 3.7 Issue flood watches

- 3.7.1** The Bureau will issue flood watches when the combination of forecast rainfall and catchment conditions indicates flooding is possible. The catchments and basins covered by flood watches include all those listed in Schedule 10. Note that flood watches may cover catchments that do not have established flood warning services.
- 3.7.2** The primary purpose of a flood watch is to provide early advice to communities and relevant emergency service organisations of the potential flood threat from a developing weather situation. Typically, a flood watch is issued 1 to 4 days before an anticipated flood event depending on the confidence in rainfall forecasts.
- 3.7.3** Flood watches will be communicated by the Bureau using the dissemination methods detailed in Section 3.9.

### 3.8 Issue flood warnings

- 3.8.1** In general flood warnings are issued based on the following criteria:
- The river level of at least one forecast location (listed in Schedule 2) is expected to reach and or exceed or has exceeded the minor flood level;
  - The flood class levels or trigger heights defined at forecast locations are expected to be exceeded (refer to Schedule 2);
  - River levels above the minor flood levels are expected at widespread information locations (refer to Schedule 3).

The specific initiating criteria, if any, for each flood warning product is listed in Schedule 10.

- 3.8.2** Flood warnings may include either **qualitative** or **quantitative** predictions at forecast locations or a statement about future flooding in more **generalised** terms as outlined in Table 2. The type of prediction included is commensurate with user requirements, the availability of real time rainfall and river level data, and the capability of available flood prediction systems. A flood warning may contain **generalised**, **quantitative** and **qualitative** predictions and typically start with more **generalised** information and become more specific as data becomes available as the event develops and progresses.
- 3.8.3** **Quantitative** predictions include expected flood class (minor, moderate or major) with more specific information on the height and time of water levels at the forecast locations identified in Schedule 2. A **quantitative** prediction can be a specific level or a range of levels and has detailed timing down to blocks of a minimum of 3-6 hours. **Quantitative** predictions are based on all available information at the time of warning issue. The target lead time of the river height prediction for each forecast location where **quantitative** predictions are provided is given in Schedule 2. For an example of a **quantitative** prediction refer to Table 2.
- 3.8.3.1** For the Bureau to be able to provide a **quantitative** prediction at a location, it is essential to have a suitable network of rainfall and river level sites upstream with data coming in real time, sufficient historical data to calibrate the flood forecasting model, a reliable rating table and documented flood impacts and flood classifications.

**3.8.4** **Qualitative** predictions include expected flood class (minor, moderate or major) and timing of flooding at the forecast locations identified in Schedule 2. The timing is indicated in blocks of six, 12 or 24 hours, using the terms such as early morning, afternoon or overnight. Such predictions are based on all available information at that time and may include advice on the peak classification that is expected or has occurred at that location. The target lead time for each forecast location where only **qualitative** predictions are provided are given in Schedule 2. For an example of a **qualitative** prediction refer to Table 2.

**3.8.4.1** For the Bureau to be able to provide a **qualitative** prediction at a location, it is essential to have at least some rainfall and river level sites upstream of the location with data coming in real time, at least some historical flood data to calibrate the flood forecasting model, a reasonable rating table and documented flood impacts and flood classifications.

**3.8.5** The Bureau may also issue flood warnings with more **generalised** predictions and information when there are not enough data to make specific predictions or in the developing stages of a flood. These warnings contain generalised statements advising that flooding is expected and may include forecast trend (rising or falling) (for examples refer to Table 2).

**3.8.6** The typical target accuracy of a **quantitative** water level prediction is that 70% are within 0.3 or 0.6 metres of observed water level. Specific accuracy targets by location are defined in Schedule 2. Achievement of these targets is not possible in all floods or at all locations. In general, predictions of a flood peak are more accurate than “reach” or “exceed” predictions that are issued during the developing stages of a flood. This is due to uncertainty of future rainfall rates and/or upstream floodplain behaviour that are used when making those predictions.

**3.8.7** A list of the flood warnings issued in Queensland, along with the basin/river to which they apply is included in Schedule 10. Details about forecast locations in each basin/river are included in Schedule 2.

**3.8.8** Flood summaries – A summary of flood watches and warnings that are current is provided to help media and other users readily access information.

**Table 2. Prediction type description**

| Prediction type     | Height prediction                                                                 | Time of prediction                                    | Example                                                                                                                                                                                                               |
|---------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Quantitative</b> | Numerical prediction<br>- Any Height<br>- Peak Height<br>Can refer to flood class | More specific,<br>typically in blocks of 3 to 6 hours | The Tully River at Euramo will exceed the minor flood level (6.0 metres) during Saturday afternoon, continuing to rise overnight Saturday before peaking at an expected level of 9.2 metres (major) about 6pm Sunday. |
| <b>Qualitative</b>  | Refers to flood class (minor, moderate or major)                                  | Range of times (6, 12 or 24 hour blocks)              | Minor flooding is expected in the Murray River at Murray Flats during Saturday afternoon, and is expected to peak above the major flood level during Sunday evening.                                                  |
| <b>Generalised</b>  | No height prediction<br>- forecast trend (rising or falling)                      | Range of times (24 hour blocks)                       | River rises and flooding are expected in the Calliope River during Saturday the 18 <sup>th</sup> of December with higher levels possible                                                                              |

### 3.9 Communication of flood warnings and flood watches

- 3.9.1** Flood watches and warnings will be issued directly to a list of stakeholders with emergency management responsibilities. The list is maintained by the Bureau but is not detailed in this document. The direct dissemination methods supported include email, fax and the internet protocols such as File Transfer Protocol (FTP).
- 3.9.2** The format of messaging in flood related products will conform to a nationally consistent standard determined by the Bureau, in consultation with the Flood Warning Consultative Committee.
- 3.9.3** Flood watches and warnings are also communicated by the Bureau via:
- 3.9.3.1 Radio:** Radio stations, particularly the ABC, broadcast flood warning information as part of their news bulletins, or whenever practicable. This form of broadcast may be covered in separate agreements between the Bureau and broadcasters.
  - 3.9.3.2 Weather warning service:** Flood warning information is recorded on a contracted telephone information service. Calls to this service incur a fee-for-service charge.
  - 3.9.3.3 Internet:** Flood watches and warnings are published on the Bureau's public web site and available by File Transfer Protocol (FTP) and Rich Site Summary (RSS) along with related rainfall and river level information (see 3.12).
  - 3.9.3.4 Social Media:** The Bureau endeavours to issue Tweets related to flood watches, flood warnings and relevant information, subject to operational constraints and in connection with other weather information. The Bureau website remains the main platform for the publishing of flood information.
- 3.9.4** Emergency management partners<sup>2</sup> and media can also access flood level and warning information directly from the State based Forecasting Centre and the National Operations Centre, subject to operational constraints. The Bureau does not publish to the public the contact details for the State based Forecasting Centres and National Operations Centre.

### **3.10** Data networks, communications and storage

- 3.10.1** The services to be provided by the Bureau under this Service Level Specification depend on provision of data from networks of stations owned and operated by the Bureau and partner agencies. Permanent or temporary loss of real time data may necessitate a downgrading of the flood warning service from **quantitative** predictions to **qualitative** or **generalised**.
- 3.10.2** The Bureau contribution to this network of stations includes:
- the operation and maintenance of equipment at the sites which are fully owned and maintained by the Bureau as listed in Schedule 7.
  - assisting with maintenance of equipment for other agencies at the sites listed in Schedule 8.

---

<sup>2</sup> Emergency management partners include those organisations that have an emergency management responsibility for the wider community (e.g. State Emergency Services).

- operating and maintaining Bureau-owned equipment at sites where this equipment is co-located at a site owned by another agency Schedule 9.

- 3.10.3** Where the site is owned or operated by other parties, installation, maintenance and repairs of Bureau equipment will depend on adequate access being provided to the Bureau and any of its contractors. The Bureau will confirm access arrangements with relevant land owners before entering the premises. The Bureau also requires that the site operators provide timely advice regarding any possible faults or other issues affecting the performance of the data network.
- 3.10.4** The flood forecasting and warning service for Queensland also depends on the provision of data from partner agency data networks. The provision of these data for each of the agencies concerned is detailed in a Data Sharing Agreement between the Bureau and each partner (Schedule 6).
- 3.10.5** The Bureau will maintain the essential set of metadata describing the network of stations and related infrastructure regarding the Bureau's component of the data network, along with metadata required to inform the data ingest process for partner agency related networks and sites.
- 3.10.6** The Data Sharing Agreements are intended to reflect operational arrangements and are not legally binding and allow multiple agreements between individual and/or multiple agencies.
- 3.10.7** The parties agree to the provision of data as set out in the Data Sharing Agreements during periods of routine site operation and increased frequency during flood periods.
- 3.10.8** Data transfer protocols and conditions regarding fitness for purpose as provided by each stakeholder will be adhered to as set out in the Data Sharing Agreements for data provision.
- 3.10.9** The sharing of data as set out in the Data Sharing Agreements can be amended by following the process described in the agreement.
- 3.10.10** The Bureau has developed special purpose software (Enviromon) for collecting, alarming, storing, on-forwarding and display of data from Event-Reporting Radio Telemetry Systems (ERRTS) (field equipment) based on Automated Local Evaluation in Real Time (ALERT) data protocol.
- 3.10.11** The Bureau provides a range of supplementary services associated with Enviromon, including: installation of Enviromon software; the commissioning of an Enviromon base station or maintenance and support; and onsite Enviromon training. Software licensing and limited support for Enviromon base stations listed in Schedule 5 is currently a standard service (free of charge).

### **3.11 Operations**

- 3.11.1** The Bureau will use reasonable endeavours to provide a 24 hours a day, seven days a week operational systems capability necessary to support flood warning operations. This will include on-line computer and data ingestion systems, along with appropriate communications infrastructure.

- 3.11.2** The Bureau operates a State based Forecasting Centre in each capital city and a National Operations Centre in Melbourne on an as required basis.
- 3.11.3** Through the Forecasting Centre and National Operations Centre, the Bureau will provide operational coverage for up to 24 hours per day during flood events, subject to event requirements and operational constraints. The Bureau will advise its key emergency management clients of any impact in services if it is unable to provide sufficient staff coverage to meet the service levels set out in this Service Level Specification (see also 4.2).
- 3.11.4** Staff in the National Operations Centre will support regional operations either remotely or by providing additional capacity to the Forecasting Centre where reasonably possible during significant and long duration events. When necessary, staff from regional offices in areas not impacted by current flooding will endeavour to assist.
- 3.11.5** The Bureau will maintain an internal catchment guide for each catchment where a warning service is provided. The catchment directive documents and describes the forecast process for the particular catchment and includes flood intelligence information, flood history, contact details for partners with local knowledge and warning issue criteria.
- 3.11.6** The operation of the Forecasting Centres will endeavour to be compliant with the fatigue management guidelines developed under the Bureau's Work Health and Safety Procedures. Particular attention to fatigue management will be provided during the management of extreme events. The requirement to comply with these guidelines applies to all personnel at these centres.
- 3.11.7** The Bureau will assist in meeting the needs of the Australian Government's National Crisis Coordination Centre. The Bureau will use reasonable endeavours to support and participate in relevant critical event briefings as resources permit.

### **3.12** Maintain systems to collect data and flood information

- 3.12.1** The Bureau will maintain the systems to ingest all data being gathered through the special purpose flood warning data network.
- 3.12.2** The river height and rainfall data received by the Bureau will be published as soon as practicable (the data are supplied at different frequencies and by various methods) upon receipt into Bureau operational systems. The data will be published in the form of tables, maps and plots and will also be included in warnings and alerting messages and used in modelling systems.
- 3.12.3** Data collected in Bureau systems will be available for use by the Bureau as it requires and for distribution to the public on suitable open source licence terms<sup>3</sup>.
- 3.12.4** The Bureau will continue to collect and update the flood background information contained on its website. These include survey information, flood history and flood event reports, catchment maps and brochures.

---

<sup>3</sup> Please refer to the Creative Commons License:  
<http://www.bom.gov.au/water/regulations/dataLicensing/cclLicense.shtml>

### **3.13 Planning and liaison**

- 3.13.1** The Bureau undertakes a range of routine planning, maintenance and liaison activities that support the Total Flood Warning System. This includes contributing to related flood risk management activities within the State or Territory impacting on, or related to flood warning along with the ongoing coordination and liaison activities essential to the smooth operation of the Total Flood Warning System.

### **3.14 Support for emergency management training and exercises**

- 3.14.1** The Bureau will, within operational constraints, endeavour to support and participate in relevant disaster management activities outside of flood operational periods, including training exercises and flood response planning.

## **4 Level of service and performance reporting**

- 4.1** Achievable levels of performance provided by the Bureau are dependent on many factors including adequate access to Bureau equipment where located on sites owned by other agencies, data availability in near real time from Bureau and partner agencies, modelling and prediction capability, geomorphology of the catchment and meteorological considerations such as rainfall patterns.
- 4.2** If during a flood event the achievable service level is expected to be reduced, for any reason, below the target level as stated in this Service Level Specification, the Bureau will inform the key emergency management clients in Queensland of the reduced service level via email and phone.
- 4.3** The Bureau's performance of service will be reviewed and reported on within the context of the Total Flood Warning System annually using a standard report performance structure based on the performance indicators and the service levels defined in Schedule 2.
- 4.4** The annual performance of service report will be tabled at the last Flood Warning Consultative Committee meeting of the calendar year. This report will be published on the Bureau website here: [http://www.bom.gov.au/qld/flood/brochures/QLD\\_SLS\\_current.pdf](http://www.bom.gov.au/qld/flood/brochures/QLD_SLS_current.pdf)
- 4.5** Event based performance reports with more detailed technical information may also be produced for significant and high-profile events.

## **5 Limitations of service**

### **5.1** Performance of services provided under this document are subject to:

- (a) The availability of funds and human resources of the Bureau and its partner agencies and changes to organisational policies that may affect the terms and conditions of the Service Level Specification.
- (b) Circumstances beyond the control of the Bureau including where the performance is the responsibility of another entity.
- (c) The existence of a reliable and ongoing supply of quality real time rainfall, water level and flow data.
- (d) The reliable and ongoing availability of the computing and communication infrastructure required for the performance of the services.
- (e) Adequate communication between the Bureau and all relevant partners under this Service Level Specification and related Data Sharing Agreements and any other agreement relevant to it including on any faults or issues.

### **5.2** This Service Level Specification is not a replacement, nor does it reduce the value of any Queensland documents and agreements that describe the State's arrangements for flood warning and flood risk management arrangements that may exist.

## **6 Service Level Specification consultation, review and updating**

### **6.1 The initial and annual process for acceptance of this Service Level Specification will be:**

- 6.1.1** The Flood Warning Consultative Committee members will be provided with the draft or amended Service Level Specification in advance of a special or scheduled committee meeting.
- 6.1.2** The members of the Flood Warning Consultative Committee will distribute the draft or amended Service Level Specification within their organisations and provide feedback from their organisation at the committee meeting.
- 6.1.3** After consultation and discussion at the Flood Warning Consultative Committee meeting, the Bureau will update the Service Level Specification.
- 6.1.4** The Chair of the Flood Warning Consultative Committee (Bureau's State Manager, Queensland) will accept and sign the document on behalf of the committee.
- 6.1.5** The General Manager of the Public Safety Program will sign the Service Level Specification on behalf of the CEO and Director of Meteorology.
- 6.1.6** The Bureau will then distribute the Service Level Specification to all members of the Flood Warning Consultative Committee and publish a copy on the Bureau website.

### **6.2 The schedules of this Service Level Specification will be reviewed annually and either updated following review, or when a significant change is made that impacts on the level of services described in this document. Updates to this document will be recorded in Schedule 11.**

### **6.3 Any changes to the categorisation of a location into data, information or forecast location or to the level of services described in this document will be through a consultative process using agreed arrangements in Queensland and when required coordinated by the Flood Warning Consultative Committee.**

## 7 Signature of parties

- 7.1** This Service Level Specification has been prepared by the Bureau of Meteorology in consultation with the Queensland Flood Warning Consultative Committee.

## **Schedule 1: Flood Warning Consultative Committee**

The Queensland Flood Warning Consultative Committee was formed in 1996. The Committee's role is to coordinate the development and operations of the State's flood forecasting and warning services. It is an advisory body and reports to the Bureau and participating State and local government agencies twice each year. The membership includes

- Bureau of Meteorology (Chair/Secretariat)
- Queensland Department of Natural Resources, Mines and Energy
- Queensland Department of Infrastructure, Local Government and Planning
- Queensland Department of Transport and Main Roads
- Queensland Fire and Emergency Services
- Seqwater (Queensland Bulk Water Supply Authority trading as Seqwater)
- Queensland Reconstruction Authority
- Sunwater
- Local Government Association of Queensland

Additional organisations invited to participate include:

- Queensland Police Service
- Brisbane City Council

The nationally consistent Terms of Reference for Flood Warning Consultative Committees are:

1. Identify requirements and review requests for new and upgraded forecasting and warning services.
2. Establish the priorities for the requirements that have been identified using risk based analyses of the Total Flood Warning System.
3. Review and provide feedback on the Service Level Specification for the Bureau's flood forecasting and warning services on an annual basis.
4. Coordinate the implementation of flood warning systems in accordance with appropriate standards.
5. Promote effective means of communication of flood warning information to the affected communities.
6. Monitor and review the performance of flood forecasting and warning services.
7. Build awareness and promote the Total Flood Warning System concept.

## Schedule 2: Forecast locations and levels of service

### Column definitions:

**Bureau number:** Refers to the unique number assigned to a particular station by the Bureau

**Forecast location:** Is the specific location that will be referred to in flood warnings (refer 3.3.1)

**Station owner:** Refers to the owning and operating agency of the station. The Bureau may co-own stations. (refer Schedules 7 and 8)

**Gauge type:** Either manual (read by human) or automatic (consisting of either ALERT or telemeter gauges)

**Flood classification:** For definitions please refer to Appendix A.3.

**Prediction type:** The type of warning service that particular location can expect. (refer 3.8)

**Target warning lead time:** The minimum lead time that will be provided before the height or the flood class level given is exceeded (refer 3.8)

**Target peak accuracy:** The error within which peak river level height is predicted (refer 3.8.6)

**Priority:** The impact a temporary or permanent loss of a site will have on service delivery and in meeting performance targets (refer 3.3.2)

| Bureau number              | Forecast location | Station owner                  | Gauge type | Flood classification (m) |          |       | Prediction type | Target warning lead time |                    | 70% of peak forecasts within | Priority |
|----------------------------|-------------------|--------------------------------|------------|--------------------------|----------|-------|-----------------|--------------------------|--------------------|------------------------------|----------|
|                            |                   |                                |            | Minor                    | Moderate | Major |                 | Time (hrs)               | Trigger height (m) |                              |          |
| 146 – South Coast (Nerang) |                   |                                |            |                          |          |       |                 |                          |                    |                              |          |

**Notes:**

- <sup>1</sup> Forecasts at both Moggill and Jindalee are provided on both the rising and falling limbs of the flood hydrograph, and are in conjunction with forecasts provided for the Brisbane City tide gauge
- <sup>2</sup> Forecasts at Miva refer to the river reaches directly downstream of the township.
- <sup>3</sup> Moderate flood levels at Bundaberg Township are likely when forecasts at Walla exceed 14m.
- <sup>4</sup> Forecasts at Rockhampton are provided on both the rising and falling limb of the flood hydrograph.
- <sup>5</sup> Forecasts at Mackay are provided in Australian Height Datum as well as local tide datum.
- <sup>6</sup> Forecasts at Walkers Bend are subject to the availability of rainfall and river level data from external sources.
- DNRME = Department of Natural Resources, Mines and Energy
- Bureau = Commonwealth Bureau of Meteorology

**Notes:**

- Does not include daily rainfall, automatic weather stations and other Bureau synoptic stations.
- \* Represents multiple assets at the one site
- DNRME = Department of Natural Resources and Mines

## Schedule 10: List of flood warning related products issued by the Bureau in Queensland (warnings, watches, bulletins, river alerts)

### Flood warnings

#### Issuing of warnings

Flood warnings are issued when one or more of the following criteria are met:

- i. The river level of at least one forecast location (listed in Schedule 2) is expected to reach and or exceed or has exceeded the minor flood level;
- ii. The flood class levels or trigger heights defined at forecast locations are expected to be exceeded (refer to Schedule 2);
- iii. River levels above the minor flood levels are expected at widespread information locations (refer to Schedule 3).

Catchments for which we do not offer a formal flood warning service (e.g. Pine, Caboolture, Brisbane Creeks etc.) are not covered by these warnings.

#### Finalising of warnings

Flood warnings are finalised when river heights at forecast locations have fallen below the minor flood level and renewed rises or further significant rainfall are not expected.

#### Notes:

- River Height Bulletins (1 hourly and 3 hourly) are issued when the following thresholds are satisfied:
- Automatic stations: Typically within 1.0 metre of minor flood level, and at least two (2) sites reporting.
- Manual stations: Issue on receipt of any river height reading.

### Rainfall bulletin – 1 hourly (Published to the web)

| IDQ60370   | Leichhardt, Nicholson, Gregory, Flinders, Norman, Gilbert, & Cape Rivers  | After 9am           | 1 Hour (up to midday) | -          |

### Rainfall bulletin – longer term (Published to the web)

| Product Id | Product name                            | Initiating criteria | Updated | Finalising |
|------------|-----------------------------------------|---------------------|---------|------------|
| IDQ60129   | Daily Rainfall Bulletin for Queensland  | After 9am           | Daily   | -          |
| IDQ60004   | Weekly Rainfall Bulletin for Queensland | After 9am           | Daily   | -          |

### River alerts

There are currently no River alerts issued in Queensland.

**Schedule 11: Changes to this Service Level Specification**

| Version | Date           | Name        | Update                                                                                                                                  |
|---------|----------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| 1.0     | 10/10/2013     | Nicole Pana | Version 1.0 signed                                                                                                                      |
| 2.0     | March 2015     | Nicole Pana | Additional sentence to clause 1.6 highlighting supplementary services                                                                   |
|         |                |             | Addition of priorities to stations in schedules 2-4 and 7-9. This is defined in clause 3.3.2 and Table 1 which are also new additions.  |
|         |                |             | The addition of flood watch products to schedule 10. This is also defined in clause 3.7 which has also been updated since the 2013 SLS. |
|         |                |             | Quantitative and Qualitative clauses better described (3.8.3 and 3.8.4)                                                                 |
|         |                |             | 'Walloon' renamed 'Five Mile Bridge' in Schedules 2, 8 and 9 to avoid confusion with the 'real' Walloon several kilometres downstream   |
|         |                |             | Walloon added as an additional forecast location in Schedule 2. Removed from Schedule 3.                                                |
|         |                |             | In schedule 1 Queensland Bulk Water Supply Authority changed to Seqwater (Queensland Bulk Water Supply Authority trading as Seqwater)   |
|         |                |             | Changes to schedules to reflect comments from DNRME                                                                                     |
| 3.0     | August 2016    | Jess Carey  | Additional clause added to include the Bureau's social media service                                                                    |
|         |                |             | Update FWCC participating organisations                                                                                                 |
|         |                |             | Update various network changes throughout schedules                                                                                     |
|         |                |             | Updated flood warning update criteria to ensure more consistency                                                                        |
|         |                |             | Updated following feedback from BCC, Sunwater, QRA and Whitsunday Regional Council.                                                     |
| 3.1     | September 2018 | Jess Carey  | Updated to reflect Bureau restructure                                                                                                   |
|         |                |             | Update to schedules to include new stations throughout the network                                                                      |

## Appendix A: Glossary of terms

### A.1. General

**Forecasting Centre:** an operational area set aside in each capital city to fulfil the Bureau's role in the Total Flood Warning System specifically flood forecasting and warning.

**National Operations Centre:** The principal role of the National Operations Centre is to augment regional flood forecasting teams during major floods and to provide operational system support. The National Operations Centre is also responsible for leading new initiatives to enhance the quality of operations and services.

**Catchment Guide:** A catchment directive provides guidance specific to a catchment to help develop forecasting and warning products.

**Flood warning:** A written product to provide advice on impending flooding so people can take action to minimise its negative impact. This will involve some people taking action on their own behalf and others doing so as part of agency responsibilities.

**Flood watch:** A written product that alerts when the combination of forecast rainfall and catchment conditions indicates that flooding is possible.

**National Crisis Coordination Centre:** The Australian Government Crisis Coordination Centre has been designed to connect relevant Australian Government, State and Territory agencies to centralise Australian Government actions during complex national crises, to develop a single, timely and consistent picture or understanding of a crisis, its implications and the national capacity to respond.

**National Flood Warning Arrangements:** The National Arrangements outline the general roles and responsibilities of each level of Government in providing and supporting an effective flood warning service and includes separate chapters describing the specific arrangements and agency roles that apply in each jurisdiction.

**Protective behaviour:** generating appropriate and timely actions and behaviours from the agencies involved and from the threatened community.

**Severe Thunderstorm:** A thunderstorm is characterised by sudden electrical discharges, each manifested by a flash of light (lightning) and a sharp rumbling sound. Thunderstorms are associated with convective clouds (cumulonimbus) and are usually accompanied by precipitation. Thunderstorms are often short-lived and impact on only a small area. Severe thunderstorms may last for an hour or more and can have a more widespread impact.

A severe thunderstorm will also have one or more of the following phenomena:

- Tornado
- Wind gust of 90 km/h (49 knots) or more
- Hailstones with diameter of 2 cm or larger
- Very heavy rain sufficient to cause flash flooding

**Weather warnings:** Weather warnings are messages sent out by the Bureau to warn the community of potentially hazardous or dangerous weather conditions. Such warnings include but are not limited to: road weather alerts, severe thunderstorm warnings, severe weather warnings for heavy rain, strong or gale force winds, marine wind warnings, warnings for sheep graziers and frost warnings. More information on weather terms is given in the [Bureau's glossary](#).

## A.2 The components of the Total Flood Warning System

Based on the Manual 21 Australian Emergency Manual Series, Australian Government 2009 (see the Manual for more details).

**Communication:** disseminating warning information in a timely fashion to people and organisations likely to be affected by the flood (see Chapter 6).

**Interpretation:** identifying in advance the impacts of the predicted flood levels on communities at risk (see Chapter 4).

**Message construction:** devising the content of the message which will warn people of impending flooding (see Chapter 5).

**Monitoring and prediction:** detecting environmental conditions that lead to flooding, and predicting river levels during the flood (see Chapter 3),

**Review:** examining the various aspects of the system with a view to improving its performance (see Chapter 7).

## A.3 Flood classifications

The classification of minor, moderate and major flood levels at key river height stations is based upon the effect of flooding for some distance upstream and downstream of that station. These levels are determined using the following descriptive categories of flooding, historical data or relevant local information.

The process for establishing flood class levels involves determining local flood effects, review and endorsement by relevant stakeholders and passing recommendations to the Bureau for inclusion in forecast and warning procedures. The process for establishment of flood class levels specific to each State and Territory is documented in the National Arrangements.

- Minor flooding - Causes inconvenience. Low-lying areas next to watercourses are inundated. Minor roads may be closed and low-level bridges submerged. In urban areas inundation may affect some backyards and buildings below the floor level as well as bicycle and pedestrian paths. In rural areas removal of stock and equipment may be required.
- Moderate flooding - In addition to the above, the area of inundation is more substantial. Main traffic routes may be affected. Some buildings may be affected above the floor level. Evacuation of flood affected areas may be required. In rural areas removal of stock is required.
- Major flooding - In addition to the above, extensive rural areas and/or urban areas are inundated. Many buildings may be affected above the floor level. Properties and towns are likely to be isolated and major rail and traffic routes closed. Evacuation of flood affected areas may be required. Utility services may be impacted.
